

# CDC funding for Human Development & Disability

**1 in 5 Americans has a disability**

*We can't move ahead if we leave 54 million people behind*

### 3 BIG LOSSES DUE TO CUTS:

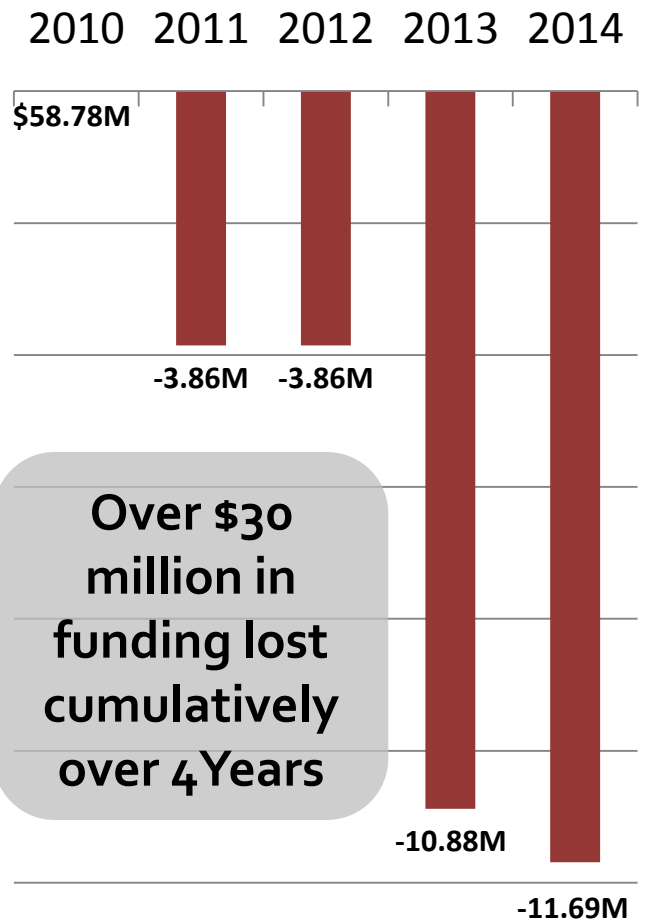

Tailor these examples for your organization

- 5,000 infants identified with hearing loss each year, but even fewer now receiving life-changing care
- 6.4M children with ADHD, but less CDC support to states providing behavioral treatment
- 54M people with disabilities, but fewer connected with health programs that work

**REAL:** Disabilities are associated with \$400 billion in healthcare costs each year

**RIGHT NOW:** 1 in 5 Americans has a disability— anyone can acquire a disability at any time

**RISKY:** People with disabilities are at increased risk for early death because of preventable differences in the burden of disease, injury, and health opportunities

We only spend \$.15 per American on these conditions.
