Chicago, IL 60611

October 8, 2018

Dear members of the LCME:

The Health is for Everyone: Action Team (HEAT), led by the Association of University Centers on Disabilities (AUCD), works to build awareness of Developmental Disability at physician practice and training levels. As a result of HEAT's efforts, the American Medical Association now has Resolution 315 on the inclusion of Developmental Disability (DD) in undergraduate, graduate and continuing medical education of physicians (May 2017: [http://www.aucd.org/docs/publichealth/DD_resolution HEAT.pdf](http://www.aucd.org/docs/publichealth/DD_resolution_HEAT.pdf)). Given this Resolution, it is timely to include DD in undergraduate medical education training. This letter is to request that the Liaison Committee on Medical Education formally integrate a requirement for content on DD into Element 7.2 of the Functions and Structure of a Medical School, Standards for Accreditation of Medical Education Programs Leading to the MD Degree.

HEAT and the undersigned organizations urge the Liaison Committee on Medical Education to maintain this momentum toward inclusion of DD in medical education by more fully utilizing Element 7.2. Although 1 in 6 adults have a DD,¹ there is currently no training requirement on DD at the undergraduate medical education level. DD's are a group of conditions due to an impairment in physical, learning, language, or behavior areas and include intellectual disability, autism spectrum disorder, hearing loss, cerebral palsy, learning disability, ADHD, vision impairment, and other developmental delays. These conditions occur among all racial, ethnic, and socioeconomic groups. The health care needs of people with a DD largely remain unserved or underserved.²⁻⁵

AUCD connects partners through its multidisciplinary network of university-based training and service centers and programs in every state and territory. Importantly, AUCD and HEAT stand ready to partner with medical education settings to assist in development of curricula or provide curricula resources to help medical educators include DD in their training sessions. Integration of DD curricula resources into existing medical education efforts addresses inclusion of DD in a systematic way that

can make a meaningful impact while using existing resources.

Focus on integrating DD into Element 7.2

DD is a life-long condition. People who have DDs are present in all age groups, all socioeconomic backgrounds, and every community in the U.S. These individuals will receive care from providers in every specialty. Medical students need content and clinical experiences to support the continuum of care needed for all – including the large population of people with DDs. Integrating DD into Element 7.2 would allow medical schools to link DD content to this standard, prompting documentation of learning objectives around the unique needs of this group, while creating a better prepared physician workforce that is able to serve the communities and settings in which they will eventually practice.

Formally integrating DD into Element 7.2 will not only affect physicians' ability to serve this population effectively but will also lead to better health outcomes for the growing number of people with DD; thus, reducing health disparities and overall healthcare costs. We urge the LCME to include DD to Element 7.2 and require medical schools to show the achievement of related learning objectives through the current Data Collection Instrument.

AUCD and its national network strive to support the critical role that physicians play in serving everyone in the community - including people who have a developmental disability (DD). Formally integrating DD into Element 7.2 would be a powerful tool toward making this a reality. AUCD and its undersigned partners thank you in advance for your timely consideration of this request. For further information, please contact Dr. Adriane Griffen, AUCD's Senior Director of Public Health and Leadership, at agriffen@aucd.org or 240-821-9374.

Sincerely,
