

Below are additional resources to guide you when creating accessible print and online materials:

This website is dedicated to spreading information about the research going on at [NC State University](http://www.ncsu.edu/) on the accessibility of information graphics (InfoGraphics for short) for blind and low vision users. Our system is called TIKISI, which stands for Touch It, Key It, Speak It. TIKISI is a multimodal way of exploring graphical information in an eyes-free fashion.

Web Accessibility for Designers

The focus of web accessibility is often on web development – the things that happen in HTML, CSS, or JavaScript after a site has been designed visually. Optimal accessibility should start much earlier, as part of the visual design process. We have created an infographic that highlights a few important principles of accessible design.

Infographics and accessibility. An overview resource with many other resources embedded within it on specific topics. http://www.acdowd-designs.com/860_wp_final.pdf Blogger comments on the previous post. chris.throup.org.uk/2012/04/14/accessible-infographics/

Accessible Infographics Community Group

The goal of the Accessible Infographics CG is to make information graphics, like bar charts and maps, as accessible as possible to all. The plan is to bring together experts and pioneers in the fields of data visualization and accessibility, to create use cases and requirements in a systematic manner, to devise and propose additions to SVG that improve accessible options for data in that and other graphics formats, and to document best practices and tutorials for making infographics accessible.
