

COVID-19 Vaccine

If you have any questions or need help, call the COVID-19 Call Center:
1-866-779-6121. The center is open all day and every day.

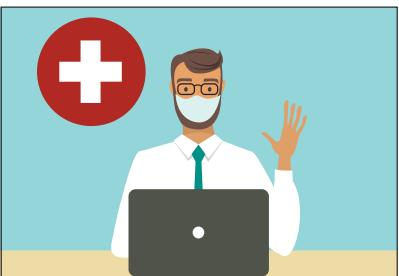

COVID-19 is a virus
that has made
many people sick.
Some people have died.

Now, there are vaccine shots
that put medicine
in your body. The medicine
protects you from COVID-19.

**When it's my turn,
I can get my shot
to stay healthy.**

I will go to the doctor's
to get my shot.

I will check in.
I will sit and wait
for my turn.

A cold wipe will be
rubbed on my arm.
It might smell funny.

I will sit very still, and then
feel the shot. It will feel like
a pinch or a prick.

Then I will get a bandage
on my arm.

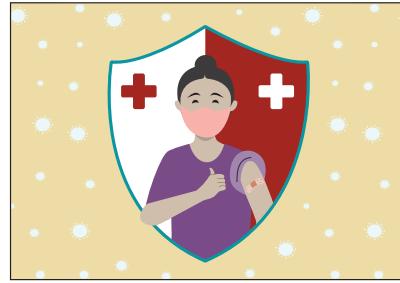

The doctor or nurse might
ask you to sit and wait a
little bit before you go home.
They want you to be okay.

They will tell you if you need another shot to stay healthy.

You might need to come back in 3 or 4 weeks for a second shot, and...

You will go through the same steps with the second shot.

When they tell me I am okay, I go home.

I might have a red spot from the shot. My arm might be sore. I might feel tired, have a headache or fever.

After a day, if my arm is still red and sore, and I still feel sick...

I can call my doctor.

Or I can call the COVID-19 Call Center, 1-866-779-6121, and press 3 for help.

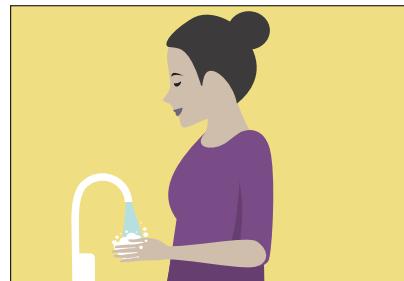

After a couple of days, I will feel fine.

I will still need to
wear my mask for awhile.

I will still try not
to get too close to people.

I will still wash my hands.
A lot!

I will be happy I did my part!

**COVID-19 vaccine protects
me, my family, my friends and
other people.**
