Senator Tom Harkin, Chair Subcommittee on Labor, Health and Human Services Senate Committee on Appropriations Room S 128, The Capitol Washington, DC 20510

Senator Thad Cochran, Ranking Member Senate Committee on Appropriations Congressman David Obey, Chair House Committee on Appropriations Room 2358-B Rayburn House Office Building Washington, DC 20515

Congressman Todd Tiahrt, Ranking Member Subcommittee on Labor, Health and Human Services, Education Committee on Appropriations

Re: Implementation of data collection provisions to address disparities in PPACA

Dear Senators Inouye, Harkin and Cochran and Congressmen Obey and Tiahrt:

The undersigned organizations, dedicated to the eradication of health disparities and the promotion of health equity, are writing to express our strong support for the immediate implementation of Section 3101—Data Collection, Analysis, and Quality of the Patient Protection and Affordable Care Act, PL 111-148. This section requires that, no later than 2 years after the date of enactment of PPACA, any federally conducted or supported health care or public health program, activity or survey (including Current Population Surveys and American Community Surveys conducted by the Bureau of Labor Statistics and the Bureau of the Census) collects and reports to the extent practicable data on race, ethnicity, sex, primary language, and disability status for applicants, recipients, or participants.

As PPACA is implemented, more individuals will obtain coverage and changes to the health care delivery system will improve quality. It is essential that data on race, ethnicity, sex, primary language, and disability status are collected to ensure disparities in health care access and quality are identified and addressed, and that programs are designed from the outset to serve the most vulnerable populations. The Institute of Medicine in its groundbreaking report, *Unequal Treatment: Confronting Racial and Ethnic Disparities in Health Care*, included data collection and monitoring as a key recommendation to identify factors associated with health disparities, help health plans monitor performance, ensure accountability to enrolled members and payors, improve patient choice, allow for evaluation of intervention programs, and help identify discriminatory practices. Similar data collection provisions were included in the bipartisan health equity legislation, S. 1576 (Kennedy/Cochran)/H.R. 3333 (Jackson), and H.R. 3014 (Solis) introduced in the 110th Congress. This data collection is also a critical component for ensuring enforcement of Section 1557, the nondiscrimination provisions in PPACA.

In order to facilitate the immediate implementation of Section 3101, we urge you to:

 Strike the section that conditions implementation of Section 3101 on direct appropriation of funds. Section 3101(g) authorizes such sums as may be necessary for each of fiscal years 2010 through 2014 for the purposes of carrying out Section 3101. However, the following section 3101(h) states that: "notwithstanding any other provisions of this section, data may not be collected under this section unless funds are directly appropriated for such purpose in an Appropriations Act." Subsection (h) is unnecessary and ostensibly blocks HHS from taking any steps to collect the critical data it needs to provide quality care for all communities and address disparities in health status. We urge you to include language in appropriations legislation to strike this provision so that there is no question that HHS may allocate existing resources and begin implementation immediately.

- Appropriate \$50 million in FY 2011 to begin implementation of Section 3101. We recognize
 that to implement Section 3101, appropriate resources must be allocated either directly or as
 part of existing programs. We propose that \$50 million be appropriated for implementation
 within the Agency for Healthcare Research and Quality (AHRQ), the Centers for Medicare &
 Medicaid Services and the Office of Minority Health, three agencies that play an integral role in
 addressing disparities and assuring high quality health care.
- Adopt the Institute of Medicine standards for collection of ethnic subgroup and language needs. Section 3101(a)(2) requires the Secretary to develop data collection standards including for sex, primary language, and disability status. In 2009, the IOM was commissioned by AHRQ to develop standards for collection of race, ethnicity and language data. The report, Race, Ethnicity, and Language Data: Standardization for Health Care Quality Improvement, recommended variables for standardized collection of race, ethnicity, and language need, including that HHS develop and make available nationally standardized lists for granular ethnicity categories, and spoken and written languages, as well as rules for aggregating granular ethnicity categories to the broader OMB race and Hispanic ethnicity categories. These standards should be adopted by HHS for use by all public health and health care agencies that are either Federally supported or conducted.

Requiring that these data are collected, reported, analyzed and disseminated is consistent with the goal of transparency and accountability of the public health and health care systems. We urge you to prioritize the above recommendations through the appropriations process for FY 2011 and FY 2012.

Sincerely,
