Including People with Disabilities in Reproductive Health Programs and Services

Introduction

The National Association of County and City Health Officials (NACCHO)’s Health and Disability program works with local health departments (LHDs) to increase the inclusion and engagement of people with disabilities into all public health programs, products, and services. Findings from a recent national survey of LHDs (Table 1) suggest that many LHDs provide reproductive health services to members of the general population; however, very few specifically include people with disabilities in these services. The purpose of this fact sheet is to educate and raise awareness of LHDs about the importance of including men and women with disabilities in existing reproductive health programs and services offered by LHDs.

The Importance of Including People with Disabilities in Reproductive Health Programs and Services

20% of American people with disabilities live in poverty. People may need help identifying and contacting services; and women with disabilities are at increased risk for domestic violence.

Tips for Women with Disabilities on Understanding Breast Cancer

- Breast Cancer Awareness
- Risk Factors for Breast Cancer
- Clinical Breast Exams and Screening
- Mammograms and Screening
- Breast Cancer Diagnosis
- Breast Cancer Treatments and Side Effects
- Care During and After Breast Cancer Treatment
- Insurance Coverage for Mammography

Use Medicines Wisely

Avoid common medicine mistakes. Check the FDA website for more resources for women and their families.

- Get a record keeper to list your medicines.
- Download a booklet to help you talk to your doctor about your prescription medicines.
- Watch videos to learn other helpful tips.

Medicines can treat health problems and help you live a healthier life. When used incorrectly, medicines can also cause serious health problems. Many of these problems can be prevented. Learn four 44 tips to avoid common medicine mistakes.

1. Ask questions.
2. Keep a list.
3. Follow directions.
4. Safely store and throw out medicines.

Submit Your Resources
Criteria for Resource Inclusion

• Is the resource available online?
• Is the resource in an accessible format? 
  (Accessibility considerations may include appropriate font size, 508 compliance (alt tags), video captioning, etc.)
• Does the resource use respectful/person-first language?
• Will the topic/content increase the capacity of public health providers who provide services to people with a disability?
• Is the content considered to be ‘most current' or ‘accepted' as valid information?

Public Health is for Everyone has been developed in collaboration with the Centers for Disease Control and Prevention (CDC), National Center on Birth Defects and Developmental Disabilities (NCBDDD)
Including People with Disabilities: Public Health Workforce Competencies
About the Project

• The *Including People with Disabilities – Public Health Workforce Competencies* was a multiyear Project funded by
  • Centers for Disease Control & Prevention (CDC)
  • National Center for Birth Defects and Developmental Disabilities (NCBDDD)
  • Office for State, Tribal, Local, And Territorial Support (OT))
• Developed by a national committee comprised of disability and public health experts
• Provide foundational knowledge about the relationship between public health programs and health outcomes among people with disabilities
• Primarily designed for professionals already working in the public health field but can also be used for public health workforce training
About the Competencies

• Compared to people without disabilities, people with disabilities are at a higher risk for poor health outcomes such as hypertension, obesity, falls-related injuries, and depression.

• Knowledge about the health status and public health needs of people with disabilities is essential for addressing health disparities.

• Most public health training programs do not include curriculum on people with disabilities and methods for including them in core public health efforts.

• Improve the health of people with disabilities by building a stronger public health workforce skilled in ways to include people with disabilities in all public health efforts.

Four Competencies

**Competency 1:** Discuss disability models across the lifespan

**Competency 2:** Discuss methods used to assess health issues for people with disabilities

**Competency 3:** Identify how public health programs impact health outcomes for people with disabilities

**Competency 4:** Implement and evaluate strategies to include people with disabilities in public health programs that promote health, prevent disease, and manage chronic and other health conditions

Call to Action:
Include people with disabilities in public health program planning and design

How:
• Identify a program, health promotion event, or community need
• Creative partnerships
• Talking with people with disabilities and caregivers
• Competencies resource for examples
